Adrien CLAUDE

Network / Online Programmer

@ adrien.claude.88470@gmail.com claudeadrien.com linkedin.com/in/adrien-claude Villeurbanne, France
(Open to relocate)

Skills

Networking: **Socket - TCP / UDP - Client-side prediction - Replication - Snapshot - Server-authoritative architecture - lag compensation**

Language: **C++** - **C#** - **C**

Engines & Frameworks: **Unity (DOTS / ECS, Netcode for Entities) - Unreal Engine - SFML**

Cloud & Infrastructure: **AWS - IaC - Windows services**

Tools: **Git / GitHub / SVN / CMake**

Soft Skills: **Problem-Solving / Analytical Thinking / Technical Communication / Autonomy / Teamwork**

Experience

Ubisoft Ivory Tower

Project: The Crew Motorfest (live-service game)

04/2026 - 10/2026

Role: **Online Programmer Assistant (Intern)**

- Added support for **dynamic server scaling**
- Implemented **seamless player transitions** between **servers** and **proxies**, **without disconnections**, including during server shutdowns
- Developed the first phase of the **zero-downtime server update** system
- Extended the **AWS infrastructure as code** with new features
- Rewrote and improved the **Windows Service Controller**

Projects

Travelers Netcode

06/2025 - 04/2026

Personal Project, self-taught

Custom networking library in C++17, built **from scratch**

- Built a cross-platform (Windows / Linux) TCP socket **communication layer**
- Designed a **message system** with **automatic serialization and deserialization** of **custom message** types
- Implemented a **client-server architecture** using a **custom ECS** to **synchronize entities** and their **components**
- Created a **component system** where **components** are **automatically serialized**, **deserialized** and **replicated** between **clients and server**
- Implemented a **snapshot system** to **synchronize entities** and their linked **network components** between **server and clients**

Suna

01/2025 - 05/2025

3rd Year Project at Creajeux

Competitive FPS built with **Unity DOTS** (**ECS** and **Netcode for Entities**)

- Built various **simulations** in **ECS** (**client/server**)
- Engineered the **networked shooting system**
- Managed **calculation** and **processing** of **player shot damage**, including **hit location**
- Designed a **hybrid networked animation system**, **combining Unity's ECS** with the **GameObjects-based** animation system
- **FPS camera** system and **spectator mode**
- Achieved **accurate replication** of **player movements**, **animations**, and **shots** across the **network**

Education

Creajeux

RNCP 6 - Game Programmer

- Completed - 06/2026

Lycée Georges Baumont

Vocational High School Diploma (Baccalauréat Professionnel) in Digital Electronic Systems

- Completed - 06/2022
